

Features & Benefits

Data and image backups, ransomware protection and disaster recovery tools, all in one easy-to-use solution.

All-in-One Technology

reevert brings you the combined benefits of a full-featured intelligent hybrid backup and storage solution with cloud backup and recovery capabilities, all managed from a single, easy-to-use admin panel.

reevert supports multiple backup and data protection mechanisms:

- Hourly, daily, weekly and monthly snapshots of locally stored data.
- Instant restores or roll-backs of local data.
- Data protection and sync for local network shares, NASes and shared folders.
- File /folder-level backup for Windows, Mac and Linux computers on your network.
- Image backups for physical and virtual Windows based servers, workstations and laptops.
- Seamless daily, weekly or monthly cloud data backups to Amazon S3, Wasabi hot storage, IBM Cloud and others with bandwidth throttling to prevent bandwidth saturation during business hours.
- Flexible snapshot retentions and scheduling.

Efficient Snapshots

reevert automatically takes hourly, daily, weekly and monthly snapshots of your data. No matter how big your datasets are, capturing and restoring local snapshots only takes seconds. Restoring local snapshots does not consume additional disk space. Each snapshot only includes actual changes from previous snapshots, which accelerates recovery and reduces storage costs.

Built-in Filesystem Efficiency

reevert uses filesystem compression, making the backup process fast and efficient. Filesystem compression helps save valuable disk space and improves disk I/O performance. In addition, OpenZFS's dynamic filesystem block size allocation makes the most optimal use of storage resources.

Reliable Data Recovery

Disk failures or disasters might be the first scenarios that come to mind when you think about data protection. But hackers and thieves are out to destroy or lock up your data as well. Malware and Ransomware like WannaCry can encrypt your valuable business files and render them useless. Many victims pay steep ransom demands and don't even receive decryption keys in return.

Malware and Ransomware attacks are on the rise. It's more a question of when you'll be attacked than if. Be prepared with a foolproof backup plan. reevert's local hourly, daily, weekly and monthly snapshots will help you get your data back in a matter of seconds. In case of total site loss, cloud backups will help you get back on track.

Reliable Cloud Backups

reevert supports a variety of popular cloud storage services for off-site snapshots including Amazon S3, Google Cloud Platform, IBM Cloud and Wasabi hot storage. Leading cloud providers offer highly reliable and cost-effective off-site storage services with 99.999999999% durability.

Supported Cloud Storage Providers

Supported On-Prem, Multi-Cloud & Hybrid Cloud Solution Providers

Substantial Cost Saving

revert is an all-in-one solution. It serves as your file server and a backup appliance, providing local and cloud backup capabilities. By consolidating technology platforms and eliminating point products you can contain upfront costs and reduce ongoing expenses including maintenance, operating system and data protection software fees. And by backing up to the cloud you can reduce equipment expenses and enjoy pay-as-you-grow scalability.

Easy-to-use Web-UI

revert's intuitive web-based interface simplifies administration. IT generalists, with no special training can easily take care of day-to-day operations, freeing up specialists to focus on more strategic tasks.

Flexible Deployments Options

reevert is available as a physical appliance or a virtual appliance to satisfy diverse scalability and budget requirements. We support most popular virtualization platforms including VMware, Citrix XenServer, Xen, KVM, Microsoft HyperV and Amazon EC2.

reevert is easy to install and easy to extend. You can quickly expand capacity, without disrupting operations. Just add a new virtual disk and extend your storage pool with a couple clicks. No downtime or reboot required.

Hassle Free Maintenance

With reevert you'll spend less time worrying about backup and more time focusing on core activities to help grow the business. All day-to-day data protection tasks can be fully automated. Just set up your pools, shares and backup schedules and you're good to go. Detailed status reports give you full visibility into active and historical events and configurable notifications automatically alert you to critical issues and problems in real-time.

Feature Checklist

	Small Office / Workgroup	Enterprise
Start with free trial and renew later	X	X
License applies to one appliance	X	X
Ransomware & data loss protection, mitigates the risk	X	X
Very fast automatic & on-demand data snapshots enables more frequent backups and better RPOs	X	X
Local, Network Shares, NAS and Network Computers (Windows, Mac, Linux) on-site and off-site (cloud) data backups provides 360° protection	X	X
Physical and virtual server, workstation and laptop image backups with on-site and off-site (cloud) storage to protect operating systems	X	X
Frequent restore points to minimize lost business productivity due to lost data (1 per hour)	X	X
Intuitive web-based interface simplifies administration	X	X
Integrated storage & backup capabilities to maximize efficiency and to reduce cost	X	X
Supports Amazon S3, Google, IBM, Wasabi and more for off-site cloud backups with bandwidth throttling and AES-256 Encryption	X	X
Use this for non-domain environments	X	X
Ideal for Small Business / Workgroup setups	X	X
Ideal for Enterprise Networks		X
Maintains file system security and permissions with Active Directory integration		X
Active Directory file/folder security		X
Includes 2 image backup licenses (\$48 for each additional image license.)		X
